rubba

multiple applications include... **golf pathways** plus...

elementary sports

outdoor tracks

aged care facilities

school paths

COVA  
rubba

high density - seamless - absorbing

- **good** for outdoor living
- **good** for the elderly
- **good** for golf clubs
- **good** for schools
- **good** for pubs and clubs
- **good** for the environment

# COVA rubba

high density - seamless - absorbing

## Colour Options

## Features

- An intricate, close-knit network of small CSBR or EPDM granules that form a tighter surface than conventional rubber wetpour, creating an absorbing but firm surface for wheelchairs, walkers, golf buggies and outdoor furniture, while still providing a cushioned, highly trafficable surface.
- Can be applied at a thinner 10mm layer, as opposed to the usual 15mm or 20mm playground surfaces, reducing costs while still retaining softness and grip.
- Can be applied directly to new or old cracked concrete or pavers without the added expense of removing them first.
- Poured in place application provides a seamless finish, which can be moulded and shaped around any substrate.

## Benefits

- High density, seamless product, specially designed for higher endurance.
- Provides a cushioned, non-slip surface for areas that would otherwise be slippery.
- Firm enough to support wheelchairs, walkers, golf buggies, electric scooters and outdoor furniture.
- Available in light colours that can allow the surface to reflect heat and remain cool.
- Freshens and brightens up old, worn surfaces, enhancing them beyond their original finish.

**CSBR**  
Pre-coloured recycled tyre rubber

**EPDM**  
Coloured synthetic rubber

## Product Specifications

Covarubba has been tested for non-slip properties, durability, density and U.V. resistance.
