

traqua»

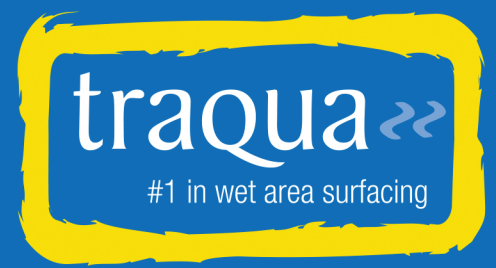

Create thrilling water environments with Traqua - the possibilities are endless

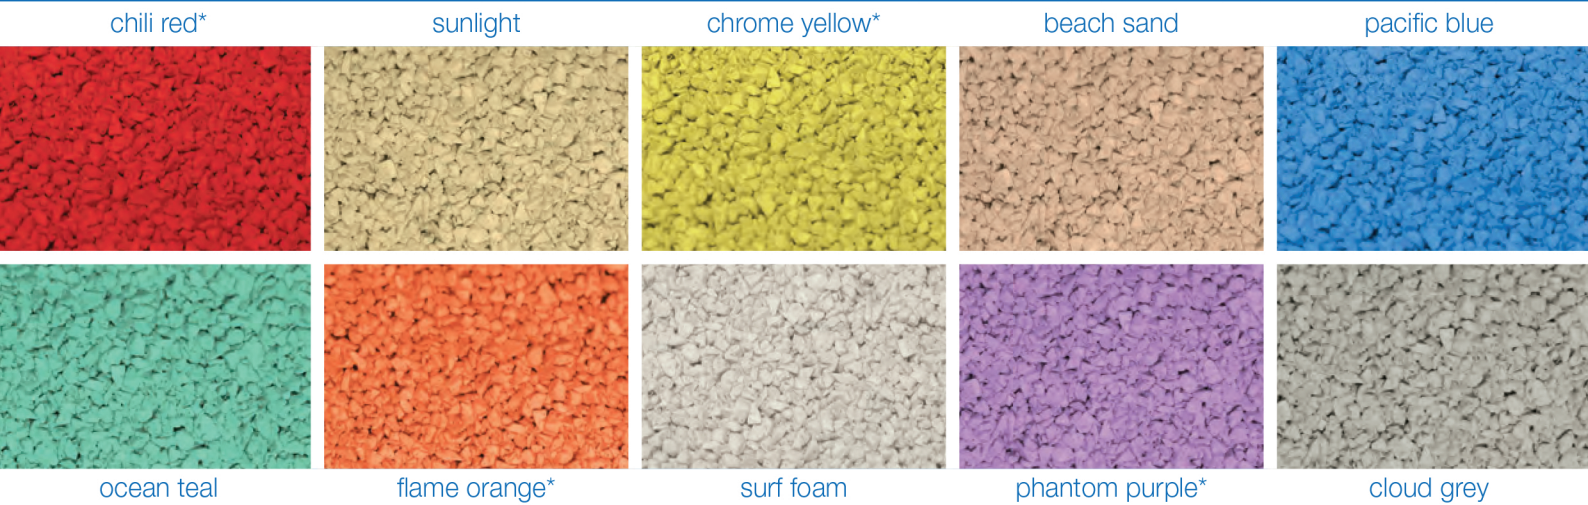

Wet area surfacing designed specifically for poolsides, splash parks and water parks providing a cushioned non-slip surface for all wet to dry outdoor applications

A range of fresh, vibrant colours for designing fun and exciting water play spaces

Colour Options

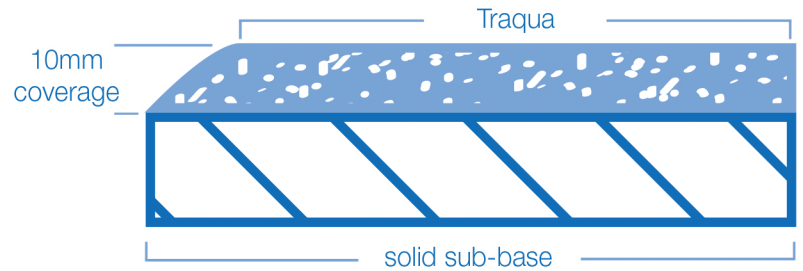

* U.V. Brights

Features

- An intricate, close-knit network of EPDM granules that create a tighter surface than conventional pour in place rubber systems.
- A specially developed range of bright, U.V. resistant candy colours are available for features and cut-ins.
- Provides an absorbing and extremely non-slip surface for areas that could otherwise be hard and slippery.
- Custom colour blends are available upon request.
- Easily maintained.

Product Specifications

Traqua has been tested for non-slip properties, durability, density and U.V. resistance. Its non-slip properties and durability are excellent for high-traffic use and its smaller granule sizes allow for higher density and compaction for a firm surface. Bright colours have been developed with special U.V. resistance to be more resistant to fading in areas with high sun exposure.

Benefits

- Specially designed for pool sides and wet areas.
- Available in lighter colours that allow the surface to reflect heat and remain cool.
- Provides underfoot comfort with a bright, attractive, modern finish.
- Granules are coloured all of the way through for visual longevity.
- Totally porous surface which allows the water to drain or dry out quickly.
